AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1.   (Currently Amended)   An image transmitting system comprising an image server and a display terminal connected via a network, wherein;

said image server is provided with a function capable of classifying image data according to [[the]] predetermined subscription conditions and creating at least one folder for managing said image data, and

said display terminal is provided with a function for specifying [[the]] a subscription of a desired folder, and

when new image data satisfying the predetermined subscription conditions of aforementioned desired folder has been stored in the image server, acquiring notification thereof and/or said new image data.

2.   (Currently Amended)   An image transmitting method of an image transmitting system comprising an image server and a display terminal connected via a network, wherein;

image data is classified according to [[the]] predetermined subscription conditions and at least one folder for managing said image data is created in said image server, and

[[the]] a subscription of the desired folder is specified at said display terminal, and

when new image data satisfying the predetermined subscription conditions of aforementioned desired folder has been stored in the image server, notification thereof and/or said new image data is acquired by said display terminal.

3.   (Currently Amended)   A computer-accessible storage medium for recording a program that causes a computer to execute the image transmitting method of the

4

image transmitting system comprising an image server and a display terminal connected via a

network, wherein;

said program contains procedures for classifying image data according to [[the]]

predetermined subscription conditions and creating at least one folder for managing said image

data.

4.   (Currently Amended)   A computer-accessible storage medium for

recording a program that causes a computer to execute the image transmitting method of the

image transmitting system comprising an image server and a display terminal connected via a

network, wherein;

said program contains specification procedures for specifying a desired folder from

among the folders, of which there are at least one, created in the image server for classifying

according to [[the]] predetermined subscription conditions, and managing said image data, and

acquisition procedures for, when new image data satisfying the predetermined

subscription conditions is stored in the image server, acquiring notification thereof and/or said

new image data.

5.   (Currently Amended)   An image server of the image transmitting system

comprising an image server and a display terminal connected via a network, wherein;

said image server is provided with a function for classifying image data according to

[[the]] predetermined subscription conditions and creating at least one folder for managing said

image data.

6.   (Currently Amended)   A display terminal of the image transmitting system

comprising an image server and a display terminal connected via a network, wherein;

said display terminal specifies the subscription of a desired folder from among the

folders, of which there is at least one, created in the image server for classifying according to

[[the]] predetermined subscription conditions, and managing said image data, and

said display terminal is provided with a function for acquiring, when new image data satisfying the subscription conditions of said desired folder is stored in the image server, notification thereof and/or said new image data.

7.   (Currently Amended)   An image transmitting system comprising an image server and a display terminal connected via a network, wherein;

said image server is provided with a function capable of classifying image data according to [[the]] predetermined subscription conditions and creating at least one folder for managing said image data

said display terminal is provided a function for specifying the subscription of the desired folder, and

when new image data has been stored in said desired folder, notification thereof and/or said new image data is acquired by said display terminal.

8.   (Currently Amended)   An image transmitting method of the image transmitting system comprising an image server and a display terminal connected via a network, wherein;

image data is classified according to [[the]] predetermined subscription conditions and at least one folder for managing said image data is created in said image server, and

[[the]] a subscription of the desired folder is specified at said display terminal, and

when new image data has been stored in said desired folder, notification thereof and/or said new image data is acquired by said display terminal.

9.   (Cancelled).

10.   (Currently Amended)   A computer-accessible storage medium for recording a program that causes a computer to execute the image transmitting method of the image transmitting system comprising an image server and a display terminal connected via a network, wherein;

said program contains specification procedures for specifying a desired folder among the folders, of which there is at least one, created in the image server for classifying and managing said image data, and

acquisition procedures for, when new image data satisfying [[the]] predetermined subscription conditions is stored in said desired folder, acquiring notification thereof and/or said new image data.

11.   (Cancelled).

12.   (Currently Amended)   A display terminal of the image transmitting system comprising an image server and a display terminal connected via a network, wherein;

said display terminal specifies [[the]] a subscription of a desired folder from among the folders, of which there are at least one, created in the image server for classifying and managing said image data, and

said display terminal is provided with a function for acquiring, when new image data is stored in said desired folder, notification thereof and/or said new image data.

13.   (New)   A computer-accessible storage medium for recording a program that causes a computer to execute the image transmitting method of the image transmitting system comprising an image server and a display terminal connected via a network, wherein:

said program contains acquisition procedures for, when new image data satisfying predetermined subscription conditions is stored in the image server, acquiring notification thereof and/or new image data on the display terminal.

14.   (New)   An image server of the image transmitting system comprising an image server and a display terminal connected via a network, wherein;

said image server is provided with acquisition procedures for, when new image data satisfying predetermined subscription conditions is stored in the image server, acquiring notification thereof and/or new image data on the display terminal.

7

15.   (New)   The computer-accessible storage medium of claim 13, wherein the predetermined subscription conditions further comprises at least one of image data from a specific examination, image data of a particular series of data from a specific examination, and/or image data acquired for a patient who has a specified doctor in charge of the patient's care.

16.   (New)   The image server of claim 14, wherein the predetermined subscription conditions further comprises at least one of image data from a specific examination, image data of a particular series of data from a specific examination, and/or image data acquired for a patient who has a specified doctor in charge of the patient's care.
